Professional Summary

M.Tech CSE (Data Science and Engineering) student at NIT Jalandhar with 1+ years of internship experience as a Research Intern and Machine Learning Engineer. Skilled in Python, C++, R, machine learning, deep learning, databases, and applied software development. Experienced in developing Python-based applications, designing and evaluating ML models, and conducting end-to-end experimental research from preprocessing to performance analysis.

Technical Skills

Programming Languages: Python, C++, R
Machine Learning / Deep Learning: Machine Learning, Deep Learning, Transfer Learning, Feature Extraction, Model Training, Model Evaluation
Web / Database: HTML, CSS, JavaScript, PHP, MySQL, Streamlit
Visualization: Tableau, Power BI

Experience

Research Intern – Machine Learning & Deep Learning **Aug 2022 – Aug 2023**
CPS Lab, Institute of Informatics and Communications *New Delhi*

- Developed a deep learning pipeline for cardiac murmur detection from phonocardiogram signals using denoising, feature extraction, spectrogram generation, model training, and evaluation.
- Applied transfer learning architectures for automated classification of cardiac signals and performed feature extraction, model design, training, validation, and performance analysis.
- Conducted end-to-end experimental research covering preprocessing, feature engineering, model development, validation, and interpretation of classification performance.

Machine Learning Engineer **May 2022 – Aug 2022**
Rising India *Bangalore*

- Developed a Python and Streamlit-based application for multiple disease prediction and nutrition management.
- Integrated pretrained machine learning models into the application pipeline while implementing industry-specific requirements.
- Worked across model integration, data handling, application development, and deployment-oriented implementation.

Projects

Search Engine

- Designed and implemented a scalable search engine using inverted indexing and TF–IDF ranking for efficient multi-keyword document retrieval.
- Optimized query processing using hash-based indexing and priority queues for fast retrieval across large document collections.

Fake Review Detection

- Built a machine learning system to identify potentially fake product reviews using engineered textual and behavioral features.
- Trained and evaluated supervised models while addressing class imbalance and optimizing precision–recall trade-offs using F1-score.

Publication

Transfer Learning Based Cardiac Murmur Detection in Phonocardiogram Signals – Computer Methods in Biomechanics and Biomedical Engineering, Taylor & Francis, 2025. **First Author.**

Education

National Institute of Technology, Jalandhar **2025 – 2027**
M.Tech CSE – Data Science and Engineering *CGPA: 9.09*
Cluster Innovation Centre, University of Delhi **2019 – 2023**
B.Tech – IT & Mathematical Innovations *CGPA: 9.14*
Board of Secondary Education **2019**
Class XII – Mathematics *91%*

Certifications

- Web Development – Internshala
- Machine Learning – Udemy
- Data Science – College Finder
