Professional Summary

M.Tech CSE (Data Science and Engineering) student at NIT Jalandhar with 1+ year of experience in machine learning, deep learning, and applied software development. Strong foundation in Python, C++, ML/DL, model evaluation, databases, and information retrieval. Experienced in building Python-based ML applications, developing search systems, designing ML pipelines, and conducting end-to-end research from data preprocessing to model evaluation. First-author of a peer-reviewed research publication.

Technical Skills

Programming	Python, C++, R
Machine Learning	Machine Learning, Deep Learning, Transfer Learning, Feature Engineering, Model Training, Model Evaluation, Classification
AI / Data Engineering	Information Retrieval, TF-IDF, Inverted Indexing, Data Processing, Database Design
Web / Databases	HTML, CSS, JavaScript, PHP, MySQL, Streamlit
Visualization	Tableau, Power BI

Experience

Research Intern – Machine Learning & Deep Learning **Aug 2022 – Aug 2023**
CPS Lab, Institute of Informatics and Communications, New Delhi

- Developed a deep learning pipeline for cardiac murmur detection from phonocardiogram signals, including signal denoising, feature extraction, spectrogram generation, model training, and evaluation.
- Applied transfer learning architectures to extract meaningful representations from spectrograms for automated classification of cardiac signals.
- Performed end-to-end experimental research covering preprocessing, feature engineering, model design, training, validation, and performance analysis.
- Published the research as first author in a peer-reviewed journal. [Publication](#)

Machine Learning Engineer **May 2022 – Aug 2022**
Rising India, Bangalore

- Developed a Python and Streamlit-based application for multiple disease prediction and nutrition management.
- Integrated pretrained machine learning models into a production-oriented application pipeline and implemented industry-specific requirements.
- Worked across model integration, data handling, application development, and deployment-oriented implementation.

Projects

Search Engine

- Designed and implemented a scalable document search engine using inverted indexing and TF-IDF ranking for efficient multi-keyword information retrieval.
- Optimized query processing using hash-based indexing and priority queues for fast retrieval across large document collections.
- Implemented document indexing, query processing, relevance-based ranking, and information retrieval.

Fake Review Detection

- Built a machine learning system to identify potentially fake product reviews using engineered textual and behavioral features.
- Trained and evaluated supervised models while addressing class imbalance and optimizing precision-recall trade-offs.
- Used F1-score and classification performance analysis to evaluate model effectiveness.

Education

National Institute of Technology, Jalandhar **2025 – 2027**
M.Tech CSE – Data Science and Engineering *CGPA: 9.09*

Cluster Innovation Centre, University of Delhi **2019 – 2023**
B.Tech – IT & Mathematical Innovations *CGPA: 9.14*

Board of Secondary Education **2019**
Class XII – Mathematics *91%*

Certifications

Web Development – Internshala — Machine Learning – Udemy — Data Science – College Finder
